GVWR - Gross Vehicle Weight Rating: Minimum is 10,000 lbs, however 11,000 or greater is recommended. Never exceed your vehicle's GVWR.

Notes on RAM 2500: Caution and advise we do not promote, recommend or support installation into these trucks. 2014+ have rear coil springs which are not suitable for use as a wrecker platform. NOT RECOMMENDED.

Notes on RAM SB: Less than 8' box length (2500/3500), we will not install or sell for use on this truck as the frame is not suitable for wrecker use. No guarantees, no warranty.

2021+ GM SB 2500/3500 trucks: Not recommended based on lack of frame access for mounting.

ALL TRUCKS: We assume your truck has stock suspension. All trucks will need additional suspension support/work to handle the loads required of a wrecker. Stock suspension is not sufficient. Call for recommendations.
